## **Whole Blood Program Information**

### Low-Titer O+ Whole Blood

#### **Prehospital Blood Administration**

- Prehospital blood administration is associated with a reduction in death after injury.
- Hemorrhage secondary to traumatic injury is the leading cause of death of Americans from ages 1 to 46.
- Whole blood administration promotes clotting.

#### **What makes whole blood the best choice?**

- Whole blood helps in hemostatic regulation, replacing the same composition of fluid lost by the bleeding patient.
- Compared to component therapy, the use of whole blood leads to a 48% reduction in mortality in trauma patients.
